Feature: Positive and Negative scenario test for primeNumbers API

Scenario Outline: A successful primeNumber response

- ✅ **Given** a valid "<limit>"
- ✅ **And** a valid prime number request
- ✅ **When** prime number api is called
- ✅ **Then** a successful response is returned

Examples:

	limit
✅	50
✅	100
✅	1000

Scenario Outline: A successful primeNumber response with multi-threaded

- ✅ **Given** a valid "<limit>"
- ✅ **And** a valid prime number request
- ✅ **When** prime number multithreaded api is called
- ✅ **Then** a successful response is returned

Examples:

	limit
✅	50
✅	100
✅	1000

Scenario Outline: An unsuccessful primeNumber response

- ✅ **Given** an invalid "<limit>"
- ✅ **And** a valid prime number request
- ✅ **When** prime number api is called
- ✅ **Then** an unsuccessful response is returned

Examples:

	limit
✅	0
✅	-1
